

Add Mediacast channel on your Roku device

Supported models: Roku LT, Roku HD, Roku 3, Roku Express, Roku Express +, Roku Streaming Stick, Roku Ultra, Roku TV.

Step 1. Prepare a ROKU channel file

[Download](#) Roku channel ZIP file from our website.

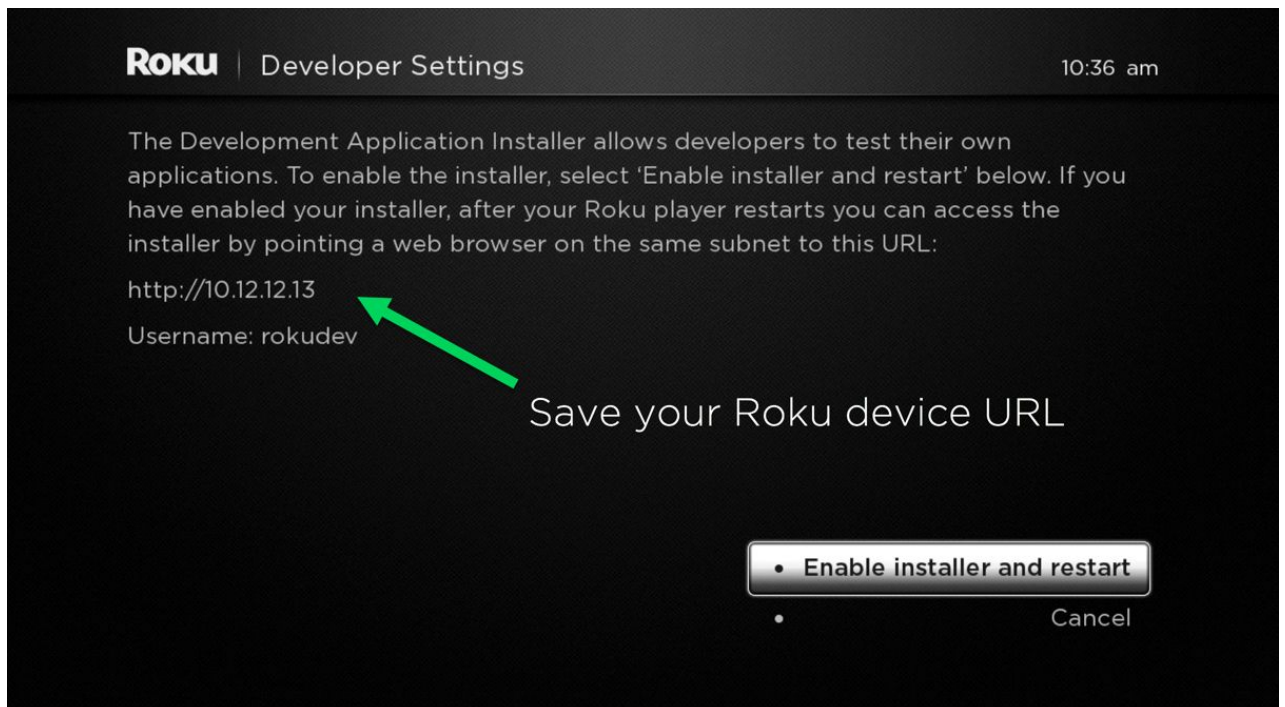

Step 2. Setup your Roku Device in “Developer Mode”

Using your Roku remote (or Roku iPhone Remote App), enter the following sequence:

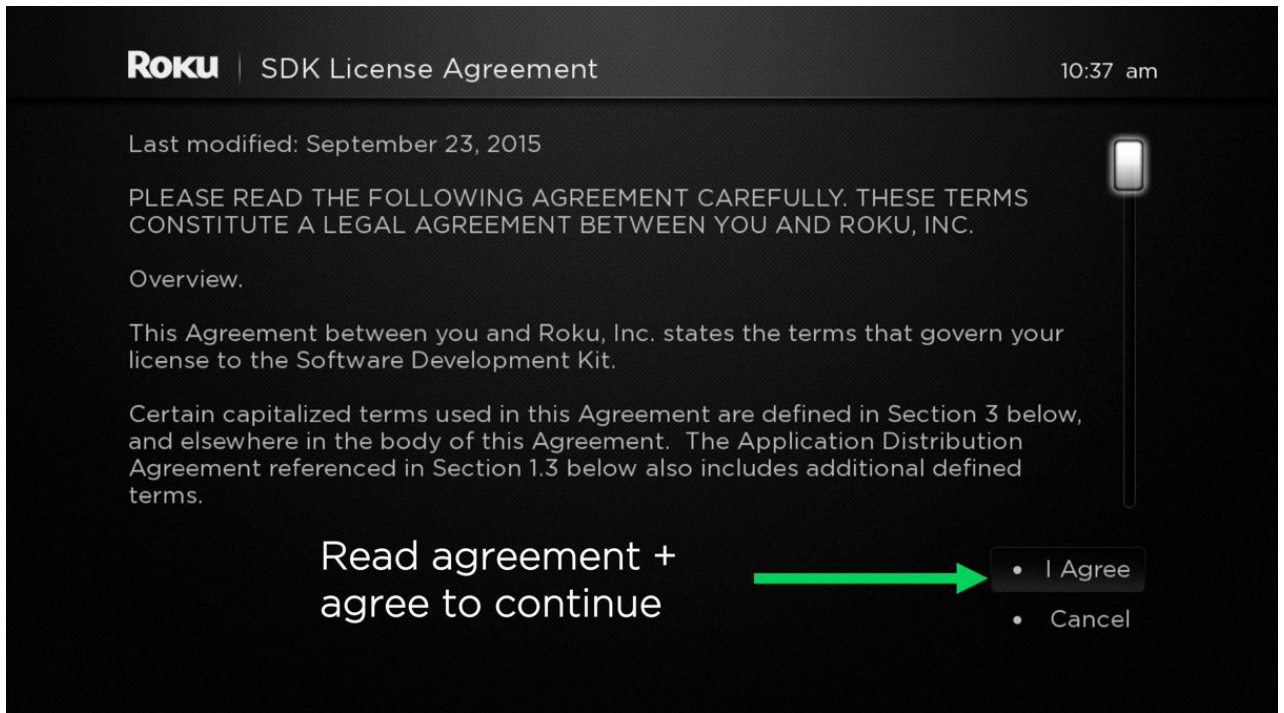

Note: This secret code enables the Developer Application Installer, which allows you to test channel applications directly on your Roku device.

Follow the steps provided in the following Developer Settings sign up flow:

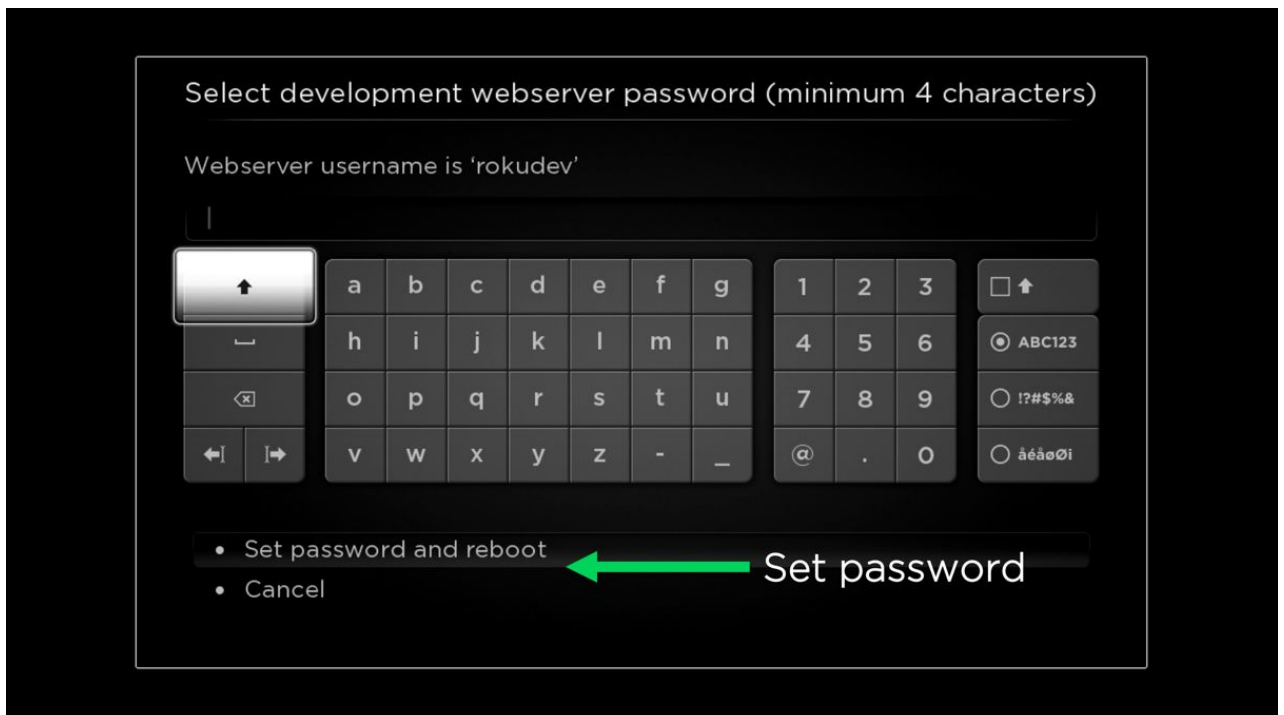

Once you begin this process, the dialog will prompt you to restart to continue to the process.

Note: Make sure to save the Roku device URL!

The following prompt will ask to set a password for the Roku device:

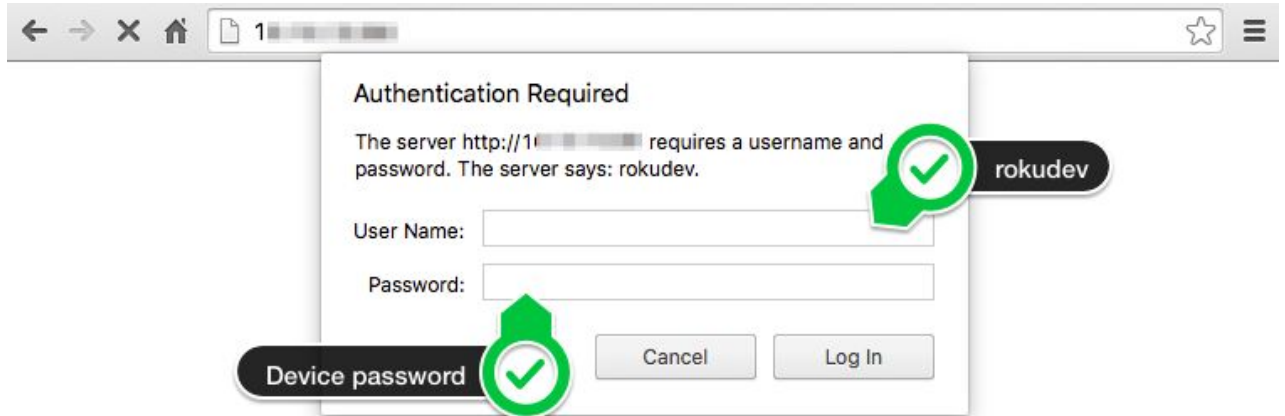

This ensures your device is protected on your local area network.

This completes the steps for enabling Developer mode, continue to the next section for loading applications onto the device.

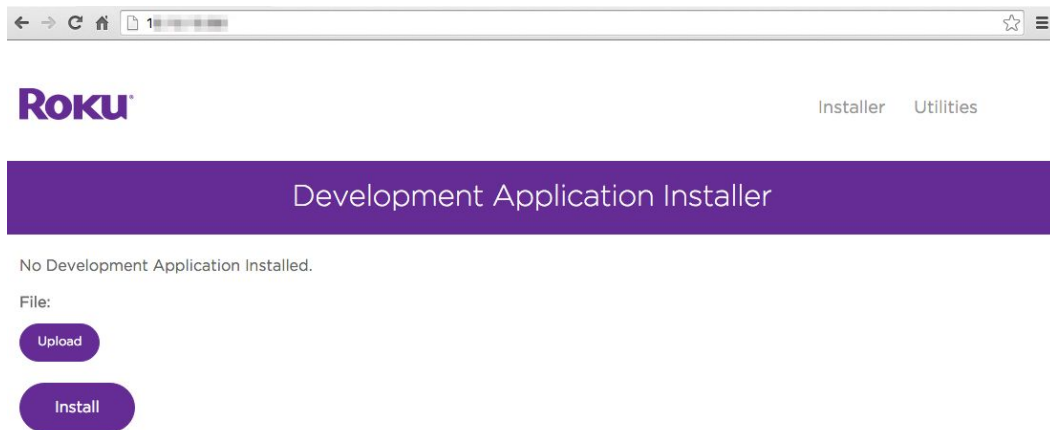

Step 3. Accessing the Development Application Installer

After reboot, open a web browser on your computer and enter the Roku device URL (i.e. *http://192.168.x.x*)

Once the page successfully opens, you have successfully connected to your Roku device in 'Developer Mode'.

The primary screen will show the development application installer:

Step 4. Installing the channel

Click “**Upload**” and select our application file “*mediacast-roku.zip*” and click **Install**.

After this Mediacast channel will be installed on your Roku device.
